Continuously Connecting Canadian Regulators

CNAR 2021 WORKSHOP:
BEYOND THE BASICS:
PSYCHOMETRICS & TEST DEVELOPMENT IN CREDENTIALING
OCTOBER 7TH, 12:00 P.M.-3:00 P.M. ET

Have you ever wondered what goes into developing and administering a credentialing examination? Do you worry whether the candidates who pass your exam are truly competent? This is the crux of psychometrics and test development. Regulators in Canada have a statutory obligation to protect the public; the proper application of psychometric and test development principles is a vital component.

Whether you are new to the field of psychometrics or have participated in one of our bootcamps before, this session will provide you with valuable information on how examinations are developed and validated. In addition to introducing important steps in the Assessment Life Cycle, this session will focus on specialized areas of psychometrics such as: forensic data analyses, collusion detection, equating, and scaled scores.

W **hat You Will Learn:** Not a fan of math? Don't worry! All topics will be presented in a non-technical manner and will allow attendees to:

- Understand the work that goes into their program
- Identify new areas for continuous improvement
- Become a more educated consumer of psychometric and test development purposes

Presented by: Dr. Chris Beauchamp, Meazure Learning
